**Let's Explore Color in Procreate:** Let's explore Color within Procreate is an excellent choice for anyone who enjoys working with Procreate for illustration or a surface designer and wishes to get a lot of color inspiration and understand how vital color and simplify their lives in converting to RGB into CMYK.

**Who is this course for?**

Illustrators, artists, or designers of an intermediate or higher level with an understanding of Procreate's digital software. I won't be teaching you how to make illustrations or use the tools available in Procreate, but rather how to make a color palette. This is why I do not recommend this course for beginners, but even if you're beginning to learn about Procreate, you will still get much from understanding more about the color.

**The materials you'll require for the project for class:**

- It is recommended to use Procreate on Apple pencil and iPad (to follow precisely the way I draw.) Other than that, any other tablet or similar drawing software like Photoshop.
- And Photoshop to convert to CMYK.

In this class, I will discuss my method for developing a signature color palette that's CMYK user-friendly, mini palettes, and also recoloring my work.

**We will go over the following aspects:**

- Why is color so crucial?
- The distinction is the difference between RGB the difference between RGB and CMYK.
- How do you develop a unique color palette?
- How do you break down your favorite colors into mini color palettes?
- How do you ensure that the palette you use is CMYK compatible?
- How do you create an image of a color palette using Procreate?
