

Mitov VideoLab v8.0.0.142 for Delphi & C++ Builder 12 Athens Full Version

2025-05-27 09:54:05 [label](#) [我要反馈](#) [下载页面](#)

supports creating advanced video applications quickly with just a few lines of code. With VideoLab, you can drop and arrange all the pieces needed to develop a video player, screen recorder, or video editor using a mouse. The system can record, handle, study, adjust, merge, change, and stream videos in real time. So, you can tie different areas of your app together, and VideoLab will easily handle the complicated tasks.

Delphi (VCL and FireMonkey), Visual C++ (MFC), and .NET (including C# and VB.NET) are some of the programming environments that the library supports. Since the OpenWire platform is used, you can reuse your code and change technologies when necessary. In addition, it handles a range of video processing standards such as DirectShow, FreeFrame, Intel IP, and the earlier standards of Video for Windows and WaveAPI.

No need to worry over video formats or streaming technologies, as they are managed through the smart components included with **Mitov VideoLab**. Suppose you want to screen record, live analyze, or make your video jukebox with cool effects and transitions. In that case, VideoLab gives you the best and most flexible processing service for your software.

Key Features of Mitov VideoLab :

1. **Video Capture** – Record from webcams, IP cameras, camcorders, or even screen content.
2. **Video Playback** – Play AVI or DirectShow video files within your applications.
3. **Screen Recording** – Easily capture desktop activity as video.
4. **Video Mixing & Transitioning** – Combine multiple video sources, add effects, and use transparency features.
5. **Format Conversion** – Convert videos between formats using built-in conversion tools.
6. **Real-Time Filtering** – Apply filters and visual effects live or during post-processing.
7. **Playlist & Jukebox Support** – Create custom playlists with smooth transitions for multimedia apps.
8. **Broadcasting** – Stream live or recorded video content over the internet.
9. **Video Editing Tools** – Build professional video editing solutions with cut, mix, and trim features.
10. **Streaming Support** – Connect to video streaming servers for real-time video playback.
11. **Video Analysis** – Perform live or offline video analysis with histogram and signal visualization.
12. **Cross-Platform API** – Write code once and reuse it across Delphi, .NET, and Visual C++ environments.
13. **Multi-Technology Support** – Use modern and legacy video standards including DirectShow, FreeFrame, Intel IPP, and VFW.
