- Motion Tracking
- Camera Tracking

In order to do Motion Tracking, We will first understand what we'll be learning through the class and how all of it is accomplished. After that, we will get to know about Interface. After that, we will implement Motion Tracking and then include the Asset after that.

What is motion tracking and how is it taught by Udemy?

Motion tracking is a technology and technique used in video production and computer graphics to follow the movement of an object or point in a video or film footage. It's commonly used for various purposes, including adding visual effects, overlaying graphics, or stabilizing shaky camera footage. Motion tracking software analyzes the movement of specific features or markers in a video and can apply that information to other elements, such as 3D models or text, to make them appear as if they are a natural part of the scene.
