ALL The Details

The textures were scanned from genuine 35mm film in 4K resolution. There are tiny streaks of marker ink as well as the edges that are ragged from the perforations. All of it is visible in sharp, unpublished detail.

SUPER QUALITY TOOLKIT

The package includes more than 40 animations and SFX to experiment with. Drag and drop files come pre-keyed or based on basic blend modes. You can mix them with different ways to create unique designs or use them to obscure certain parts of your footage, make your own custom transitions, or add a look of your video.

Of course, you're encouraged to experiment with playing with Cinemarkers. They can be scaled and colored however you want. Combining them can create new designs. The most important thing is to use blend modes. We suggest 'Difference.'

SFX

We believe that our transitions are quite slick. However, you've also heard of us for our distinctive SFX included in every pack. It's the same here too. Crisp, analog sound effects for analog textures are also included.

IPAD Version

The package is available in its iPad version. It includes HD files that have been converted into HEVC MOVs. This significantly reduces the size of the file to allow editing via mobile devices. We did not test this pack on LumaFusion for the iPad.
