

## Blender Market – Blender Gpt 23.03.23

2025-02-10 16:58:11 label 我要反馈 下载页面

**Blender Market – Blender Gpt 23.03.23:** Include a cube and camera into the scene. The camera should always face the cube, and the Keyframe to move about 10m from the cube between the beginning and the end frame. Unlock the full power of Blender using its Blender GPT plug-in, a powerful AI-powered creative assistant that incorporates OpenAI's most cutting-edge GPT models within Blender. Blender environment.

It was designed specifically for 3D users and artists. This plug-in allows users to turn their concepts into reality using naturally speaking prompts quickly.

### How does it work:

- Download the Blender GPT extension and enter the OpenAI API key into the preferences.
- Go to the GPT panel, and then select the preferred model, for example, get-3.5-turbo
- If you follow a prompt and then take a few seconds for the model to communicate directly to your model.

### Frequently Asked Questions

Q Which models are currently available?

After initialization, you will see a list of all available models that will be retrieved directly through OpenAI. Be aware that not all of the models will work with the extension. It's been designed and tested to work with GPT. However, all models are available to allow future-proofing.

Q: Where can I find the API key?

A: You'll have to create an API key using the account you have created with your OpenAI account.

Q: Why is Blender been frozen?

The answer is that Blender will be unresponsive until the prompt is entirely removed. If the prompt is more significant or has a slow model, this could cause Blender not to be responsive for some time.

Q: It didn't accomplish what I had asked for it?

A: The quality of the instruction executed depends upon the capability of the model and its understanding of the prompt and Blender API. Making more reliable prompts requires trial and error to obtain the best results.

What data is available by the API?

A: In the prompt, the model will be provided by the number for your Blender installation to customize the output. The model is not provided with any other information to the model other than what you have specified in the prompt.

Q Can I be able to see the code that is being created?

The answer is yes; the generated code is sent to the Blender console, which is opened by clicking the "Window "Window" menu. Furthermore, disabling "Automatically execute generated code" will allow you to save the code in an unstructured text block that can be viewed within the Text Editor space.

Q: Will this cause damage or ruin my project?

A: This extension relies on the execution of code generated and may be different in terms of stability. Always make backups of your Blender project.

Are there security issues?

A: The commands received from the model run in the Blender internal Python environment. The generated code should be secure if you don't make malicious commands. To examine code before executing it, you must disable this "Automatically execute generated code" option in your preferences.
