Database    Tools

There is a complete as well as effective database management and an admin along with the development of the tool, right for the Microsoft SQL Server and Microsoft Azure SQL database. **MS SQL Maestro** is considered the best admin tool of the GUI available for the users and Developers of the Microsoft SQL Server as well as other SQL database control management and development processeses. It is a comprehensive program that permits the user and developer to administer the Microsoft SQL Server and to create databases, and at the same time provide multiple data editing and sorting of the groups, filtering the attribute and to the visual database programmer as well as the query Builder, for the users and developers. This includes the link setting as well as different other choices that are available to help the user link to the database immediately.

Set up a database profile to lessen the process of manipulating the database. It can permit the user to create different profiles. It can permit the user to handle its databases, and the program is capable of providing a visual database programmer and permits the user to create diagrams and depict the connection between every item in the user database. This is considered to simplify the maintenance job significantly and can show the information very intuitively. It is possible to see all the items in the database of the user in another panel that can show them in a tree-like arrangement. Navigating the database content and creating new items, editing the present items, or replicating them is straightforward.

also includes a visual query Builder designed to permit the user to create and edit specific questions without innovative SQL knowledge. They can be shown using lines, bars, points, and other fashions. Importing and exporting the data is another way that can be used by the user to import or export numerous formats that are common in nature. The program can provide an intuitive wizard for every operation and ensure the data is appropriately formatted. It is possible to correct the input format for the user, empty the tables of the goal, or even execute the SQL script, and at the same time, customize the output of the document by specifying the format of the data, fonts, and colors. To conclude, **MS SQL Maestro** is considered an efficient application available to simplify the process for the administration of the Microsoft SQL server and the creation of the SQL database. It can feature a vast selection of tools capable of assisting the user in implementing the SQL scripts, producing the visual diagram, constructing queries, and much more.

### Key Features of MS SQL Maestro:

#### 1. Database Profile Setup:

- Simplify database manipulation with the ability to create multiple profiles.
- Profiles store connection settings and various options for quick future database connections.

#### 2. Database Management and Editing:

- Utilize a visual database designer to create intuitive diagrams illustrating object relationships.
- Browse through a tree-like structure to view, create, edit, or duplicate database objects.
- Access a visual query builder without advanced SQL knowledge to create and edit queries.
- Depict table or query data in various diagram styles, such as bars, lines, or points.

#### 3. Import and Export Functions:

- Import/export data to/from standard formats with intuitive wizard modes.
- Adjust input data formats, empty target tables, execute SQL scripts, and customize output files.
- Specify data formats, fonts, and colors for precise control over information formatting.

#### 4. Other Features:

- Support for all Microsoft SQL Server versions from 7.0 to 2022.
- Compatibility with Microsoft Azure SQL Database versions 11 and 12.
- Streamlined database object management.
- Database Designer for visual representation.
- Access SQL Server security features conveniently.
- Tools for data management and analysis.
- SQL Editor with code folding and multi-threading.
- Visual Query Builder with subquery and UNION support.
- Data export/import to/from popular formats.
- Database schema refactoring tools.
- Powerful BLOB Viewer/Editor.
