Database   Tools

is an intuitive and efficient tool designed to cater to both beginners and professionals. By offering a user-friendly interface, it empowers users to construct even the most intricate SELECT, INSERT, UPDATE, and DELETE queries without the need for manual coding. With its visual query-building capability, users can effortlessly create queries of any complexity through diagrams, eliminating the need for time-consuming manual input.

Devart dbForge Query Builder for SQL Server features an auto-join function that automatically connects columns based on primary/foreign key relationships or their names, streamlining the query creation process. Additionally, users can add and edit sub-queries, sort and filter data using custom criteria, and execute queries directly while having the ability to edit table data. The integrated Query Profiler further enhances the experience by optimizing queries, ensuring optimal performance.

Moreover, **Devart dbForge Query Builder for SQL Server** provides the functionality to reverse-engineer queries, offering a comprehensive solution for SQL query creation and optimization. Whether you're a novice or an expert, this tool simplifies the query-building process and enhances productivity, making it an indispensable asset for SQL Server users.

Key Features of **Devart dbForge Query Builder for SQL Server** :

1. Create queries of any complexity on diagrams without manual coding
2. Auto-join columns by primary/foreign key or name
3. Add and edit sub-queries
4. Sort and filter data based on custom criteria
5. Execute queries and edit table data
6. Use the integrated Query Profiler to optimize queries
7. Reverse-engineer queries
