Smart HTML Elements is a framework that uses Javascript, HTML, and CSS to build web-based apps that can be used on mobile devices, touch, and PC. Smart HTML Elements contains more than 40 UI elements. Each component is built from the ground up and uses a common core. The framework core supports HTML Element extensions, inheritance, HTML Templates, Data Binding and routing, event handling and routing, and property change notifications. It also detects and adjusts device and browser compatibility.

Our examples include a suite of polyfills that support the Web Components specifications. These polyfills guarantee that Custom Elements can be supported in all browsers.

Smart is a comprehensive, innovative UI library that uses javascript, HTML, and CSS. This allows developers to create professional web applications that are cross-browser friendly and reduces development time. Smart HTML Elements has more than 60 UI components, and it is one of the fastest-growing javascript UI frameworks.

Smart HTML Elements, a modern Vanilla JS/ES6 library and next-generation front-end framework, is a new HTML JS and ES6 library. Enterprise-ready Web Components provide accessibility features such as Section 508/WCAG Compliance, WAI-ARIA, Section 508/WCAG Compliance, localization, right to left keyboard navigation, theming, and localization. Integrates with Angular and ReactJS, Vue.js Bootstrap, Meteor, and all other frameworks.

HTML Elements Smart Web Components Great Features:

- Enterprise-ready Web Components. Includes accessibility features (WAI-ARIA, Section 508/WCAG Compliance), localization, right-to-left keyboard navigation, and themes.
- Fast and professionally designed UI components for beautiful and modern web apps.
- Perfect for Enterprise web development
- Implements Bootstrap and Google's Material Design with Light and Dark modes.
- Automatically adapts to different device types.
- Easy to customize UI components to match and exceed any requirement.
- Consistent, predictable, and modern UI/UX for your users.
- Zero dependencies and zero learning curve.
- Supports Chrome, Firefox, Edge, and Safari. Safari requires web components-lite.js polyfill.
- JavaScript UI libraries and Blazor components for Web, Mobile, and Desktop.
- Theme builder for designing themes.
- Integrates with JavaScript and Blazor frameworks.
- Arbitrary-precision arithmetic and math functions.
- DateTime precision.
