

Boris Fx Particle Illusion Pro 2025.5 v18.5.1 (Win,Mac)

2025-11-04 16:25:05 label 我要反馈 下载页面

Boris Fx Particle Illusion Pro 22025 v18.0.0 (Win): Particle Illusion Pro stands out as a robust particle generator, offering users immediate access to 3D particles for the seamless creation of photorealistic effects. Ideal for motion graphics, visual effects, titles, and lower thirds, it operates both as a standalone application and seamlessly integrates as a plugin within the Continuum suite of effects.

Particle Trails and Particle Lines Enhancements:

- Introduces a "lines" option with trails, fading, and thickness variation for more dynamic particle simulations.

Deflector and Force Improvements:

- 3D Deflectors now include rotation/depth capabilities, ensuring more intricate control over particle behavior.
- Enhanced reliability and Forces now feature "Direction Turbulence" for achieving organic and nuanced particle motion.

3D Models as Emitters:

- Allows the import of C4D/OBJ files as emitters, providing options such as model wireframe drawing.
- Includes models and presets to streamline object manipulation on the stage, opening up creative possibilities.

Updated Gradient Editor and Gradient Presets:

- The gradient editor has been revamped with additional features like flip, space actions, undo/redo, and a random generator.
- Offers new color and alpha presets for an engaging and efficient particle workflow.

Easier to Use:

- Introduces a more user-friendly workflow by grouping control view parameters into labeled sections.
- "De-emphasis" functionality dims irrelevant parameters, ensuring a focused and streamlined workflow.

3D Widgets:

- Incorporates 3D widgets to simplify interactions with emitters and objects within 3D environments, enhancing user engagement and control.

Particle Trails and Lines Enhancements:

- Introducing the all-new "lines" option for drawing particle trails, breathing fresh life into virtually any particle simulation. Explore additional line features such as fading ends, thickness variation based on particle size, and more, allowing for dynamic and captivating effects.

Updated Gradient Editor and Presets:

- Revamped gradient editing with advanced features like "flip" and "space" actions, complete undo/redo capability, and a random gradient generator. Delight in the fun with new color and alpha gradient presets, making your particle color workflow more enjoyable than ever.

Deflector and Force Improvements:

Significant updates to Deflectors and Forces, essential influencers in particle dynamics:

- Deflectors are now 3D, offering rotation, depth adjustment, and 3D space animation.

Enhanced reliability of Deflectors eliminates issues like "leaking" at corners or unpredictable bounces. Forces now boast "Direction Turbulence," enabling the addition of organic motion to particles without the need for fluid dynamics.

Easier to Use:

- The Controls View (parameter list) has undergone a redesign, organizing related parameters into labeled sections.

3D Models as Emitters:

- Working with emitters and objects in 3D is now more accessible with the introduction of 3D widgets. Utilize C4D or OBJ files as particle emitters, featuring various emission options. Draw model wireframes for unique looks, and enjoy a streamlined workflow with direct position, rotation, and scaling of objects on the stage.
