Explainer Video Toolkit 4 V2 (Video builder component):

**Explainer Video Toolkit 4.** is the result of years of study on creating characters, and 5 years of experience making explainer videos. This toolkit was designed by me to be a tool that I would prefer to personally use when working with freelance clients. It is now available to anyone to make use of.

The primary goals of the template were **simplicity, minimal requirements for the system, and flexible** and I'm happy to report that these objectives were achieved. Explainer Video Toolkit four is the one template available on videohive that works effectively even on the smallest computers.

**Modification** for characters can be as easy as it is possible. It's really as simple as dropping and dragging the texture you like into a custom composition. You are also able to create your own custom textures and reuse them as often you like. You don't have to set those same settings for each character repeatedly.

The **character model** features the lowest latency that is possible, so animating and manipulating characters is very fast. There aren't any scripts or minimum layers are employed in character compositions.

**Flexible** that the device offers is incredible it is possible to create extremely tall, short thin, fat, skinny or exaggerated characters. For those who are more experienced, this template can be used as the basis for characters animations. It's no longer necessary to build rigging from scratch. Create your own texture and then animate your personal character.

**Designs** This template has been created to stay in tune with the latest design trends, so you can purchase additional elements and illustrations from any retailer on any platform and combine the elements with EVT4 elements effortlessly.

**The loading of** project files using a special project panel implies that you don't need to load a massive project file, containing all elements, but only the items you need.

**For people who are just beginning,** There are twelve videos in the tutorials folder that are short in the tutorials folder that explain everything from beginning to end ( Installation Making scenes, Composing them, Using Animation presets, Character customization Character animation, lip-sync, and utilizing different objects, such as Introductions Drawings, Typography, Diagrams... Making use of continuous rasterizing).

- 1000+ Elements.
- A character rig that is the most lightweight.
- Character rig with low latency.
- 100 100% After Effects! Everything can be customized.
- 12 video tutorials (The average duration for each tutorial is approximately 3 minutes).
- 100% vector graphics (1080p or higher resolution is feasible).
- Testing After Effects CC, CC 2014, 2015, 2016 2017, 2018 2020, 2019 2021 compatibility.
