

Winsoft Adonis Component Suite v6.6 for Delphi & CB 5-12 Athens Full Source

2024-12-18 23:03:45 label 我要反馈 下载页面

offers Delphi and C++ Builder components designed for comprehensive data access through ActiveX Data Objects (ADO). Leveraging the Microsoft ADO library enables direct interaction with ADO, ADOX, and JRO objects. The suite encompasses the ADO Component Suite, ADOX Component Suite, JRO Component Suite, and ADO Recordset Binding, providing versatile functionalities. Compatibility with TDataSet components ensures seamless integration into various development projects. The suite is compatible with Delphi/C++ Builder versions 5 through 12 and Lazarus 2.2.6. The Professional version includes the source code, allowing for customization, and the distribution of components within applications is royalty-free.

Key Features of Winsoft Adonis Component Suite:

- 1. Leverages the Microsoft ADO library for universal data access.
- 2. Facilitates direct interaction with ADO, ADOX, and JRO objects.
- 3. Encompasses the ADO Component Suite, ADOX Component Suite, JRO Component Suite, and ADO Recordset Binding for versatile functionality.
- 4. Compatible with TDataSet components, ensuring seamless integration.
- 5. Supports Delphi/C++ Builder versions 5 through 12 and Lazarus 2.2.6.
- 6. The Professional version includes the source code for customization.
- 7. Allows royalty-free distribution of components within applications.
