Warm orange shades give the skin a gorgeous bronzed look. Subtle green and blue to create a neutral background and emphasize the person's features.

- Presets for Lightroom and Photoshop (.xmp File)
- preset that works with Mobile Lightroom (.dng file)
- Presets for the Old Desktop Lightroom (.lrtemplate file)

The presets look best when used for outdoor photoshoots as well as portraits and other creative photos. Each preset was designed with the help of a photographer professional. It will look stunning with a selection of photos.

Please be aware:

- Each result will differ with every photo. The reason for this is based on the hues, colors, and lighting. from the original photograph.
- After you have applied the presets, ensure that you play using your exposure and temperature, contrast, shadows, and whites
- If you're trying to get your skin looking tanner or less brown, experiment with the intensity that orange has in its color section.
