RGB Split Effect for Posters CM - 6974535: The images you create can be loaded to create the effect used for posters. It has everything you need to produce stunning, futuristic images that are distorted in their pixels. The image includes screen lines that are reminiscent of old TV screens broadcasting channels, but with a weak signal. The rest is merely breaking the original image up into distressed shades and predominantly CMYK shades that resemble visuals of the glitch to the fullest extent.
