1.
2.

**Blender Market - Speedsculpt** is a versatile addon designed to enhance sculpting workflows by providing a range of efficient tools.

### How to design sculpting and model hard surfaces using tools?

You can use "Blender Market - Speedsculpt" to design your project.

This addon enables seamless integration of operations within the sculpting mode, eliminating the need to switch between modes.

Users can swiftly adjust detail size, perform detail flood fills with smooth modifiers, and seamlessly combine surfaces with existing sculpts.

### "Blender Market - Speedsculpt" Samples:

Additionally, Speedsculpt offers features for creating primitives, curves, skin meshes, and bones with ease, along with the ability to utilize Metaballs and perform Boolean operations. Lattice tools facilitate object deformation, while the Remesh modifier ensures optimal surface quality for sculpting or 3D printing.

Decimation features allow for mesh optimization, and the mask tool enables precise surface extraction and manipulation. Quick Pose functionality further streamlines character posing. Overall, Speedsculpt provides a comprehensive set of tools for efficient sculpting and hard surface modeling tasks.
