CData Drivers for ShipStation simplifies the integration of ShipStation data across various applications, enabling seamless connectivity with BI, analytics, reporting, ETL tools, and custom solutions. With standards-based drivers, accessing live ShipStation data becomes effortless, ensuring unmatched query performance and comprehensive access to data and metadata. This facilitates efficient data visualization and analysis, empowering organizations to make informed decisions based on real-time insights.

Extend the capabilities of your ETL tools with robust ShipStation connectivity, facilitating reliable data movement and replication. Connect your RDBMS or data warehouse with ShipStation to support operational reporting, enhance data governance, and streamline disaster recovery efforts. Additionally, support popular database protocols like ODBC, JDBC, and ADO.NET, simplifying data management across diverse database management applications.

CData Drivers for ShipStation offer straightforward integration with popular data migration, ESB, iPaaS, BPM tools, and developer technologies, accelerating application development and empowering organizations to build high-quality solutions faster. Advanced data virtualization features provide a virtual database abstraction layer on top of ShipStation data, supporting query federation and enhancing efficiency in data integration processes.

This package includes the following components:

- Excel Add-In for ShipStation
- ShipStation ADO.NET Provider
- ShipStation BizTalk Adapter

- ShipStation Data Cmdlets
- ShipStation FireDAC Components
- ShipStation JDBC Driver
- ShipStation MuleSoft Connector
- ShipStation ODBC Driver
- ShipStation Power BI Connector
- ShipStation SSIS Components
- ShipStation Tableau Connector

Key Features of **CData Drivers for ShipStation** :

1. Seamless connectivity with ShipStation data
2. Integration with BI, analytics, reporting, ETL tools, and custom solutions
3. Unmatched query performance and comprehensive access to data and metadata
4. Reliable data movement and replication capabilities
5. Support for RDBMS and data warehouse connectivity
6. Streamlined operational reporting and enhanced data governance support
7. Compatibility with popular database protocols like ODBC, JDBC, and ADO.NET
8. Integration with data migration, ESB, iPaaS, BPM tools, and developer technologies
9. Advanced data virtualization features for enhanced efficiency in data integration processes
