

WiFi Framework VCL v7.8.9.0 (17 Dec 2020) for D6-D10.4 Sydney

2026-09-20 07:28:27

WiFi Framework is your Software Developer Kit (SDK) for software developers who offers simple access to these **WiFi** attributbes on Windows desktop programs. WiFi Framework is the portion of Wireless Communication Library but may be utilized as a **stand-alone** library.

The WiFi Framework is that the title of this program frame for Delphi programmers and CBuilder programmers. Windows applications developers and programmers can utilize this highly effective platform to get WiFi features in their products and applications. The frame before you is really a development tool that enables developers and programmers to deliver their applications in complete harmony with WiFi. The frame before you has three variations known as .NET Edition, C ++ Edition, and VCL Edition.

The WiFi Framework is a part of the Wireless Communication Library, however, you could also use it individually to construct your own applications. You might even use the frame to construct 64- and - 32-bit software. Also features you could enhance your applications include BLUETOOTH FEATURES, WIFI FEATURES, SERIAL PORTS FEATURES, and IRDA FEATURES.
