TEXTURIZER Grainy Effects for Photoshop: EXTURIZER is an excellent Photoshop effect that gives your photos a grainy, slightly grungey retro, flattened look with texture and noise overlays layered over it. It creates a vintage, grainy appearance and is user-friendly. The effect can be used on the landscape, portrait architecture, or other images.

The texture can be reminiscent of stone or concrete, like gritty backgrounds. It is a great way to recreate the retro look of magazines and printed or printed newspapers.

It is a great way to achieve a retro or modern appearance.

The effect reduces contrast, flattens the image, and then creates texture layers using scratches, noise, and grain.

You will receive 1 PSD file (CS6 or higher) with texture and adjustment layers.

This file is simple to use:

- Start the Photoshop file that you downloaded
- Double-click on the smart object layer.
- Drop your photo into this clever object
- The bright object can be saved, then returned to the original file
- Size: 4000 x 3200px
- 300 dpi
- A PDF tutorial is included with the package.
