What is Skin Softener?

Skin Softener is a video template or effect designed for video editing software. The term "skin softener" typically relates to a visual effect used in post-production to enhance or smooth the appearance of a subject's skin in video footage.

These effects are commonly used in video production, especially in areas such as beauty and fashion, to achieve a more polished and visually pleasing look for subjects on screen. Skin softening can help reduce the appearance of imperfections and create a more even and glowing complexion.
