Morten Munthe Presets Classic Collection: I have perfected an editing style I've developed for more than an entire year. I've studied the theory of color and worked on fine-tuning the presets to function as a basis to edit your photos. They reflect my usage of filmic colors and lighting when editing, and they're not "one-click wonders" I created to earn a few quick dollars. I use them frequently and am proud and delighted to share them with users so that you can make your own unique editing style.

If you apply these presets, you'll be able to determine the direction you'd like to follow when you apply the image. There will be some adjustments to make but that's the point where the fun begins! Increase the contrast, alter the color, alter the white balance, and fine-tune the curve of the tone are the instances of the things you could accomplish after applying these presets. These are intended to make editing faster and also to determine which direction you'd like to take when editing. They can change the color from blue steel-like tones to deep earthy brown tones and all the shades between. The presets will have the colors you've seen in my photos on Instagram and here on this website. I use them for both personal and professional work.

Gfx plugin details of Morten Munthe Presets Classic Collection

The product is in the **Lightroom category**, for more information about this post you can click on the home page link in the sidebar.
