To create content, how to use text animation formats to make videos in After Effects?

You can create videos with animated text templates using "Stomp Typography".

Where can I download the product?

After subscription, You can download it for free from here.

What is Stomp Typography?

"Stomp Typography" typically refers to a style of typography or text animation that is dynamic, energetic, and syncs with a rhythmic or stomp-like beat. This style is often associated with video production, especially in promotional or energetic content.

"Stomp Typography" products, such as a template, pack, or software, could be a tool designed to make it easier for creators to incorporate this dynamic text style into their videos. These products may offer pre-built templates, animations, or effects that align with the stomp typography style.
