#### What's so special about This book?

As experienced sound designers are aware that real guns don't sound the same as those that we see on television. Are real guns designed for maximum durability vibrating when you shake them around? Absolutely not. But toys can! These amusing, non-lethal toys have provided a wide diversity of sounds for our recordings. They will seamlessly add to your weapon foleys and create mechanical sounds, and might even be enough to stand on their own for certain models. Again, it's your imagination that determines what extent this library can be extended.
