下载页面

Twelve PNG image overlays featuring transparent background (4500x3000px x 300 DPI)

Compatible with any program that lets you use layers (Photoshop, Photoshop Elements, Paint Shop Pro, etc.)

Note to Lightroom users: please, make sure that you've got the right plugin to work using layers.

Put the overlay on top of your image, erase using a soft brush this area of overlay that's over the face, or that you have no need for. You can mix and combine them, change the modes and opacity to create a subtle or darker appearance, and change the colors of the overlay by using the hue or saturation tools.

You'll require software that can support using JPG files as well as the ability for opening Zip files.

It is necessary to have a basic understanding of Adobe Photoshop and know how to use the layers.
