- This functions as a modifier and applies to any object.
- You may choose to release fire from the object itself or any collection
- To create an individual color gradient for the flame, open the "Realtime Flame" material node tree and connect the Color Ramp to the Color socket

What is a Realtime Flame Generator?

A "flame generator" might be associated with the creation of digital or visual effects resembling flames, fire, or similar elements. Such tools are often used in graphic design, animation, or video editing to generate realistic or stylized fire effects.

"Realtime" suggests that the generation of flames occurs in real-time, meaning the effects are produced instantly as opposed to requiring rendering time.

If a "Realtime Flame Generator" is a specific product or tool, you might find it in software related to graphic design, video editing, or game development. These tools could be standalone applications or plugins for existing software platforms.
