

Blender Market - Bagapie Assets v10.4.13

2025-02-10 16:38:17 label 我要反馈 下载页面

**Blender Market - Bagapie Assets** is an advanced addon for Blender that improves the workflow for quickly creating architectural and procedural assets with geometry nodes. Asset management, node tree setup, and asset integration are all simplified to allow users to pick, sort, and randomize assets through a friendly interface. The tool enables complex modelling tasks efficiently and effortlessly without scripting through features like parametric generators, randomizable arrays, and an ivy generator. It makes asset library integration more straightforward and makes more than a hundred different preset models accessible for advanced BagaPie GeoPack users. BagaPie geoPack users can combine geometry node packs into group packs for easier sharing and distribution.

- **Asset Browser Integration:** Select several items from the asset browser simultaneously to improve the asset management workflow.
- **Architectural Generation Tools:** To improve the architectural design, create and set stairs, fences, pipes, walls, tiles, beams, and other parametrical shapes.
- **Presets Library with Parametric Geometry:** Enable the geometry addon to gain access to over 100 different presets provided with the addon, which are helpful in procedurally creating shapes.
- **Random Arrays:** assets can be arranged in circular, linear, grid and curvilinear patterns.
- **Draw Array Modifier:** Arrange the selected objects along the specified curve to form repeating patterns.
- **Ivy Generator:** Grow Ivy using two growth methods, collision detection and gravity, for more realistic functioning.
- **Zip Generator:** Create geometry node trees and node groups easily without any scripts. Groups can be packaged easily as .geopack files, which makes sharing and installing the files easier.
- **Baga Pie GeoPack:** Geometry nodes can be grouped into packs with custom functionality using Baga Pie geo compacters, allowing easy use of set templates without importing them.
- **Pie Menu Addon:** All packs and modifiers can be accessed through an intuitive pie menu, which provides simple and faster access to and use of features.
- **No Code Needed:** Users or creators can instantly set up the feature without any further configuration, as everything is ready.
