

## 4 Animation Tools for Daz Studio 4.20 – Set 1

2025-02-10 17:06:43 label 我要反馈 下载页面

**Compatible Figures:** Genesis, Genesis 2 Female, Genesis 3 Male, Genesis 8 Female, Genesis 8.1 Female, Genesis 2 Male, Genesis 3 Female, Genesis 8 Male, Genesis 8.1 Male

**Compatible Software:** Daz Studio 4.20

Daz Studio Animation Tools - Set 1 is a set of four tools that can aid in making animations with Daz Studio.

**This set includes some of the tools listed below:**

### Animation Stripper

- This program can "freeze" the selected objects within the timeline frame that the script was running on. This is especially useful when the element you're animating was accidentally altered or moved in any way at a certain time in the animation timeline. The settings can include translation, pose shape, scale, and pose for characters along with the settings for light and camera.
- This can be done with just one object or the entire scene if needed.

### BODY2Hip:

- The information about rotation and position stored on the [Body] component of a figure definitely not the best option as it makes it difficult to put the body in a different pose within your scene.
- BODY2Hip will move the position and the rotation that is applied to the [Body] an image to the hip node of the figure in one frame, a custom range, or for an entire animation.
- It can be done for one or more figures spread across all or part of the animation.

### camera Follow Focus

- This application lets you easily set your camera to focus exactly on a subject throughout the animation timeline. This includes depth-of-field settings and the camera's focus.
- It can also be used for parts or the entire range of animation.

### The Path Plotter

- This tool will trace the path of a specific subject in 3D space within the animation range. The path may contain frame dots that show where the object is in a particular frame of the animation.
- When creating looping animation, this is an extremely useful tool to determine where objects aren't in line with their beginning and end locations and speed.
- A path could be plotted over a part of the entire range of animation.
