Aescripts Duplicate It v1.0.1:

The extension for Adobe Premiere Pro offers a solution for duplicating sequences, addressing the common issue of manually replacing nested items.

It allows users to create unique clones of active or selected sequences, including all nested elements. The duplicates are organized into bins, with options for renaming, numbering, and customizing labels. Features include prefix/suffix additions, search and replace functions, date/time stamping, and flexible label color management. While it works smoothly on most Mac and Windows computers, compatibility issues may arise on older Mac models like the 2013 MacBook Pro.
