

## Aescrips Exte 1.0

2025-02-10 17:09:58 [label](#) [我要反馈](#) [下载页面](#)

**Aescrips Exte 1.0:** A tool to extend lines. It is possible to create an extended line using shapes using animation. All you need to do to create an extended line is choose two points along the line.

### What is Exte?

It's a tool that allows you to extend the route easily!

- **"Create an extended path layer"** - Pick two paths, and make the new shape layer with an extended path.
- **"Convert to a bendable extended path"** - The extended path can be modified flexibly.
- **"Batch manipulates path points with null"** - By choosing multiple path points and then batching, manipulate the path points using just one null.
- **Trial** - It is restricted by the possibility of creating one extended route.
