FilmConvert Halation:

Halation emerges as a striking by-product of capturing light on film, creating a soft red glow or subtle halo around intensely bright areas, like neon lights or car headlights.

Originating from refracted light interacting with the anti-halation layer of film emulsion, it imparts an organic and romantic aesthetic. With FilmConvert's advanced tools, achieving this tactile softness is seamless, offering customizable settings and intuitive controls for effortless editing and rendering at exceptional speeds. Elevate your creative grade by embracing the timeless charm of halation, enhancing every cinematic scene with authenticity.
