**INSTRUCTIONS**

There are three methods of applying overlays to photos: first - by using Overlay Actions (include) 2nd Utilizing Quickstart PSD course (include only in the PRO version) 3rd, the traditional Drag'n'Drop technique.

**1ST Method: OVERLAYS Action**

This is a more progressive method as it permits you to easily apply overlays to any directory and even that of other vendors. When you set the parameters for the actions, you are able to make your hotkey to F3 (for instance) to ensure that with one press you initiate this action.

- Double-click on the overlay Actions .atn file to open it in Photoshop. After installation, you can access the Actions panel in Photoshop by clicking on "Window Actions'. There are two actions: JPEG and PNG Overlays. The main difference between Overlay Action JPEG and Overlay Action PNG is that JPEG utilizes screen blend Mode.
- Look for 'Overlays Action Select 'Overlays Action' and then press Play the action you want to play.
- Photoshop dialog box opens and asks you to choose the image. Continue to browse and locate the folder that you have unzipped, and choose the picture you like. The image will be immediately uploaded into the Photoshop folder where the image is opened.
- Reflect, scale or rotate the overlay if you'd like
- Enter the Cmd (Ctrl) and enter, and the process will result in an overlay layer and two adjustments layers. If you're required, apply a black brush to the layer mask in order to cover the image if needed, and then within the adjustment layers, modify the color or Levels to ensure that the overlay appears appropriate to the image.
- Save the image, and then show it to your customers. They will be amazed by the outcome

**2nd Way The Quickstart PSD Course**

This technique lets you work within a Photoshop file and then select the layer you prefer which makes it visible. This is useful since it is visible within the thumbnails that show layers in the image but it's not ideal because in the certain version in Photoshop the file might not be able to open correctly. This is an optional feature and is provided as-is.

**3RD WAY: DRAG'N'DROP**
