

BaiqiSoft MstGrid (Grid Control for .NET) v4.21.2.7 + CRACK

2024-12-18 23:03:30 label 我要反馈 下载页面

MstGrid is a skilled and easy-to-use information grid control; it provides detailed Excel-like functions for producing user-friendly interfaces that display, edit, format, organize, and print tabular data. It helps accelerate your application development procedure.

MstGrid is skilled and simple to use grid control; it provides comprehensive functions for generating user-friendly interfaces that display, edit, format, organize, and print tabular data. It's a helpful ActiveX component that facilitates the process of creating your own applications. Features include the ability to change each cell's format and fashions; each grid cell may display pictures along with information, any number of fixed or frozen rows and columns, automobile row or column sizing when dividers are double-clicked, move, resize, and hide columns or rows, create switching rows, enable non-continuous choice, export and import capacities, owner draw style, type one or several columns based on any standards, word-wrap, and ellipsis, cell merging, well-designed item model, along with Multilanguage support.

BaiqiSoft MstGrid (Grid Control for .NET) Amazing Attributes:

MstGrid Supports Windows themes and visual designs that mimic the designs offered in Office, such as Blue, Silver, and Olive.

- Ability to alter each cell's format and fashions
- Every grid cell can display pictures along with information
- Any variety of adjusted/frozen columns and rows
- Auto row or column sizing when dividers are double-clicked
- Move columns or rows, resize columns or rows, hide a column or row
- Produce alternating rows
- Permit noncontinuous choice
- Import and export capacities
- Owner draw style
- Type one or several columns based on any standards
- Word-wrap and ellipsis
- Cellular Telephones - Much like MS-Excel
- Well-designed Object version - Microsoft Excel-like Behavior
- Multilanguage Service

MstGrid supplies complete print and print preview services such as 45 printing setup associated possessions. With just a single line of code, programmers may display MstGrid built-in, user-friendly "Page Setup" and "Print" dialogs, enabling end-users to configure the printed look of report components, determine which information subjects or pages to publish, place text and images in webpage headers or footers, together with macros for page number, report name, and an assortment of time and date formats.

MstGrid supplies a designer job with open source that permits you to style your controller and make a prototype immediately. Use the programmer to decrease development time by letting you personalize the appearance and feel of the control in design time with an intuitive, easy-to-use interface.
