Blender Market - Bake Matcher v1.0.4:

Bake Matcher is a Blender Add-on that automates the naming of low and high-poly objects to standardize them for baking.

It renames objects with "_low" or "_high" suffixes and matches corresponding bake objects in 3D space.

Bake Matcher offers two methods for matching: Bounds Mode, which compares bounding box corners, and Origin Mode, which compares origin points.

Both methods use a user-defined Distance value to match objects and can account for floating geometry.

The add-on includes troubleshooting tools like Detect Conflicts and Find Unmatched to resolve issues.

Additional Origin Tools help set origin points for accurate matching.
