Flexera AdminStudio 2022 v23.0

2025-04-25 10:14:10

AdminStudio is an application readiness tool that assists you in identifying and addressing issues before installing. It is possible to use AdminStudio instruments to help you repackage apps and convert them to virtual formats. After importing all your physical, mobile, virtual, and physical applications into the Application Manager, rigorously test them to ensure they are suitable for distribution across your company. The last step is to automate distribution directly through your Application Manager.

AdminStudio is a set of tools integrated to assist you in creating an application-specific package in a short time and with the lowest chance of risk.

- Improve the quality of service and improve service delivery
- Reduce risk and adopt the latest technologies quicker
- Remove mobile app security concerns and compatibility issues
- Develop and deploy appropriate application virtualization formats
- Integrate seamlessly with the most popular software deployment systems
- Unify and simplify application management by implementing standard procedures
- Increase efficiency by having a central application repository
- Find issues with application packaging in a matter of minutes, not days

- Enterprise - IT-related organizations looking for an advanced solution for application packaging which can be used to centrally manage and plan applications to ensure reliable deployment of software:
  - Comprehensive, intuitive reports and Dashboards
  - Continuous Integration that Manages the Whole Life Cycle of the Application
  - Catalog of Application to Manage and manage Enterprise's Portfolio of Applications
  - Interfacing with Popular Deployment Systems
  - Complete automation via PowerShell Cmdlets
  - Provision of Virtual Machines to "Clean" Repackaging and Testing
  - Test Applications to Ensure Quality Good Practices, Conflicts, and Best Practices
  - Manage System Center Configuration Manager Application Metadata
  - The forensic perspective of EXE Installers for Conflict Assessment and Reporting
  - Advanced Editing using InstallShield
  - Repackage applications for Windows Installer
  - Create Transforms to customize Windows Installer packages
  - Java Detection and Dependency Reporting
  - Application Compatibility
  - Accelerate Application Virtualization
  - Simplify MAC OS X
  - Maintain Mobile Application Readiness
  - Simplify Scripting Challenges PowerShell Application Installation

Flexera AdminStudio Great Features:

Make it easier to prepare reliable deployment tools offered by software providers or the ones you'll have to construct yourself. Recognize and resolve issues before deployment—control applications individually and in large quantities or fully automated.

Be aware of new versions, build tests and reports, or publish your packages for many popular management tools for systems such as Microsoft System Center Configuration Manager and Intune, Workspace ONE, ZENworks, LANDesk, and many more.

所有软件资源 100%安全 已检测 无病毒 无篡改

Applications Tools

With the AdminStudio Packages Feed Module, it is easy to download the latest version of the product from a variety of software providers and receive verified commands that are silent and the detection requirements. Create updated and new software deployment software in a record amount of time.

Even the most comprehensive patch catalogs can provide just a tiny portion of the patches required to protect your entire software portfolio. You can now enjoy the biggest third-party software coverage market. You can also benefit from over 1,000 customization wizards that speed up complicated deployments. Additionally, you can join programs that automatize processing and deal with many applications that aren't included in any patch catalog in one spot.
