is a powerful and user-friendly library used by developers in more than 80 countries worldwide for working with tabular data. It provides everything developers need to manage, display, and interact with data efficiently. With its rich set of features, EhLib significantly reduces the amount of manual coding required, allowing developers to quickly format and display data without hassle. The library's components are carefully optimized for performance, ensuring that applications remain fast even with large datasets.

One of the biggest advantages of **EhLib.WinForms** is its intuitive design. Developers can explore and use the library easily, thanks to a wealth of examples, instructions, and help files. Its tools for data grouping, searching, and filtering help create visually appealing, easy-to-use interfaces, enhancing the user experience. Moreover, EhLib supports cross-platform development, making it versatile for projects on Windows, macOS, and Linux.

EhLib.WinForms is fully integrated with popular development environments like RAD Studio and Microsoft Visual Studio. It offers native VCL support for Delphi and Lazarus, making debugging straightforward. Developers also benefit from enhanced printing and previewing capabilities, as well as tools for analyzing pivot data, all while maintaining high-speed performance.

Key Features of EhLib.WinForms :

- 1. DataGridEh: The main component for displaying and organizing data, with support for data grouping, tree view mode, and auto-filtering.
- 2. SearchBox: A built-in tool that enables easy searching and filtering within the data grid.
- 3. Cell Customization: Supports different types of data in one column and allows cells to behave as hyperlinks, display
