The product is in the **After Effects Project category from VIDEOHIVE**, for more information about this post you can click on the home page link in the sidebar.
To search for similar products to Constructor Of The Book (Videohive 15076094) - AE Project,

You will see folded "BOOK" in the project panel when you open the project. This is a folder that you will need.
Inside you will see a few compositions. Also, in the timeline panel, you will see some compositions that are the same as in the project panel. So at first, you will need to put in the timeline panel composition "Open" (it is already there). This is open of the book. You will see the marker "Open end."

You should put the following composition in this place, "Page_01". (it is already there, but you should move it to the marker "Open_End") This is a composition where you should change text, photo, or other info. (In the project panel, you can find all your pages in the folder BOOK/PAGES). If you open this composition (double-click on it), you will see a layer with the name "Control" and marker "End" on it. Y

ou should select this marker and move it where you want. At the end of this marker, your info will fade out.

So with this marker, you can choose the duration of your page—open folder BOOK/PAGES/Page_1. Here you will see two compositions, Text_1 and Text_2. You should change the info in your composition "Page_01" in these compositions. Open composition "Text_1" and change their text.

Or You can put their placeholder. To do it, select composition "PLACEHOLDER_1," which you can find in folder BOOK/PAGES/PHOTOS/PLACE_1 (2,3,4,5, etc.)/PLACEHOLDER_1. Please select it and drag and drop it in the timeline panel.

Then open composition "PLACEHOLDER_01_Here" that you can find in the same folder as your "PLACEHOLDER_1" composition (BOOK/PAGES/PHOTOS/PLACE_1 (2,3,4,5, etc.)/PLACEHOLDER_01_HERE) and put there your photo or video (If you use video, don't forget change frame rate on 30fps. To do it select your footage and click Ctrl+Alt+G (Cmd+Alt+G on Mac OS). And then change frame rate on 30 fps).

After that, you will see your placeholder in composition "Page_01".

After you change the info on your first page, you should go back to composition "Final_Render" And put the following composition Turn_1 or Turn_2. The first turns one page, and the Second is a few pages. You will see that both these compositions are already in the timeline, but you should also move it to the point when your info in composition "Page_01" disappears.

You will see the marker "Start" in these two composition that can help you understand where your page start turns. Also, as you will see, the composition "Open" continues after the marker "Open_end."

You should select this layer and extend the layer. (It will be easy to work with the project because you will see the book after it opens.) So then, after composition turn_1 or turn_2, you should put the next page that you can find in the following folder (BOOK/PAGES/Page_2).

Do the same as you already did with page_01, but use compositions that you will see in the same folder as your Page composition.

You can use as many pages as you need. After the last page, you must put the composition "Close" (Already in the timeline

panel).

After you compose the book (see the first photo to understand how your compositions will look), you should cut your compositions "Open" near the marker "Start. Cut here "Open" layer."

Then select layer "Control" and change some settings.

If you use BG_customizable, you can put your photo or video. To do it, open the composition "BG_PLACEHOLDER," which you can find in the folder BOOK, and drag and drop your photo or video there. It is all; after you do all settings, render the composition "Final_Render." if you don't understand something, please write me via my profile page on Videohive. (http://videohive.net/user/alextantsura)

Also, here are some tips that can help you:

Click Alt+] or Alt+[to cut your layer. When you drag and drop your new page, it will be too long, so select it and click Alt+]. Click "s" on the layer, and you will see the scale of this layer. It can help if your photo or video is too massive or small.

- Simple modification.
- 1920x1080; 30fps
- After Effects CS5 and above.
- A detailed Help document is included.
- No plug-ins are required.
- The control Layer is included.
