Introducing Autofocus Pro, the ultimate solution to add depth of field to your Blender scenes effortlessly. Formerly known as aperture, this plugin transforms the cumbersome task of focusing in Blender into a seamless experience, mimicking the behavior of a real camera and giving you more creative freedom.

Benefits:

- **Focus Anywhere:** Choose from a range of built-in focus regions or create your custom focus area with the ease of drawing a bounding box. Tailor the Focus to your subject's position in the scene.
- **Smooth Focus Pulls:** Achieve realistic, smooth Focus pulls with intuitive settings. Say goodbye to sudden jumps in focus points—Autofocus Pro replicates the gradual adjustments of a real camera.
- **Frame-by-Frame Focus:** Handle complex scenes with multiple objects moving effortlessly in and out of the frame. Autofocus Pro dynamically pulls Focus for every frame, ensuring consistency and realism in your animation.
- **Efficient Depth of Field Application:** Experience the quick depth of field application, even in low-memory or highly complex scenes. Autofocus Pro's optimized code ensures swift and efficient processing.

Why Autofocus Pro?

- **Scene-wide Focus:** Unlike other techniques limited to one object, Autofocus Pro sees your entire scene, allowing you to focus on any object seamlessly.
- **Customization Freedom:** Define focus regions anywhere in the scene, breaking free from the constraints of focusing only on the center. Create your bespoke focus areas effortlessly.
- **Realistic Focusing:** Replicate the natural behavior of a camera with smooth Focus pulls. Autofocus Pro ensures a realistic and cinematic touch to your animations.
- **Instant Application:** No need for complex setups or tedious adjustments. Autofocus Pro works with a single click, saving time and streamlining your workflow.

Experience the evolution of focusing in Blender with Autofocus Pro—where creativity meets simplicity.

New Changes:

- Baking autofocus no longer makes Blender unresponsive.
- Baking autofocus visualizes which frame it's working on so you can see progress.
- Baking autofocus is cancellable by pressing "escape" during Focus.
- Now officially supports 3.5.

- Clicking "stop showing focus region" turns off the render region - preventing accidentally rendering only part of the scene you were focusing on.
- I refactored the focusing engine.
- Delete focus keyframes for your current camera at the press of a button (for pro only).
- Improved UI for Advanced Settings menu.

It's the perfect solution for applying autofocus on any scene that allows you to:

- You can focus on your Blender camera in just one click
- Autofocus any frame within your frame
- You can focus quickly on fast-moving scenes or slowly as if using a camera.
