.Net   Other   Components

The .NET FTP Library by the Kellerman software is described to be the ultimate in reliability as well as performance for the user and the developer. It permits the user and developer in order to actually take out the network cable during a transfer process add an event to plug it in the back and it'll resume right after he feels left out. The component has the ability to detect if the server of the FTP server is shutting down during the process of the middle of the transfer. The standard of the operations is basically supported that it is done in order to help to shorten the development process time for the user and the developer. The process of transferring the file Faster by the use of the directory synchronization as well as the mode Z compression as well as the security transferring of the fights over the SSL for the users and the developer. It also has the ability to inform the users as to how long the transferring process will take with the use of the powerful progress of the statistics. It is also considered to be the ultimate in performance as well as reliability. A new user has the ability to take the network cable in a move. The .NET FTP Unit also has the ability to utilize any of the programs of the .NET and it permits the user and the developer in order to use the library of the .NET FTP for the C# FTP or even the VB.NET FTP. Though it has the ability to be bought separately but still a dinner item as the ability to be contained from the gold suite for the users on the Developers. The subscribers of the Gold suite are capable of getting all the product upgrades and new goods just as a part of the annual subscription.

Kellerman Software .NET FTP Library Great Features:

It has the following features on attributes that are stated as below such as:

- It is very easy to use as the component has a full GUI FTP client demo which is included in it. There is a certain source code that is provided in the language of C# as well as VB.NET.
