Blender Market - Procedural Signs v1.3.0: Introducing our comprehensive toolkit that offers unparalleled versatility, enriching your settings with depth and detail, whether in urban streetscapes, bustling commercial zones, or digital platforms. Enjoy limitless customization possibilities with a selection of 6 distinct sign types, ranging from small LED panels to intricate neon signs. Easily add signs from images or text to tailor your scenes effortlessly.

Sign Types:

- **Neon Signs:** Craft high-definition neon signs that exude character. Input your text, choose your font, and fine-tune design elements with precision, maintaining exceptional detail even in close-up shots.
- **Billboards:** Perfect for vast outdoor spaces. Set up colossal billboards by uploading your image and refining details to match your aesthetic.
- **Light Signs:** Illuminate your scenes with vibrant light signs. Import graphics or photos and decide on luminance through sleek LED animations or classic bulbs.
- **Pixel Displays:** Ideal for urban and high-tech settings. Feature videos or images on pixel displays, adjusting tilt and curvature for a seamless fit.
- **Multifaceted Signs:** Suitable for brand promotions and store entrances. Combine text, shapes, and logos with customizable lighting solutions.
- **Compact Messages:** Design impactful, personalized messages. Adjust speed, text hue, and background pixel colors for maximum effect.

Optimize Option:

- Neon signs with a high polygon count can be optimized. After setting your preferences, click "Optimize" to adjust polygons according to your needs. Be cautious, as further modifications are impossible after selecting "Apply."

Preset Collection:

- A curated collection of presets is included for quick edits and inspiration. Choose from a diverse range for a solid foundation, facilitating faster integration into your scenes.
- Add Your Touch:
- Merge, combine, or overlay different sign types and save them in the preset tab for easy recall and reuse.

Pack Includes:

- Procedural Signs Add-on installer
- Asset folder
- Signs presets

Limitations:

- In Eevee, enabling motion blur with Light Sign and Led Style signal types may cause issues. This is resolved in Cycles by turning off the "deformation" option in object properties for motion blur.
