Blender Market - ReBevel:

The **ReBevel** add-on for Blender allows users to adjust existing mesh bevels by modifying properties like segment count, bevel size, and profile. It also supports collapsing bevel edges back into sharp corners. This tool is designed to preserve geometry data, such as edge sharpness, creases, and material IDs when tweaking bevels. The add-on includes the LoopRingSelect add-on, which simplifies edge loop and ring selection by offering a pie menu for quick growing or shrinking of edge loops. To use ReBevel, press Alt+B to adjust bevels, and for LoopRingSelect, use **L** to activate the pie menu. The installation involves downloading the zip file and adding it through Blender's preferences.
