Aescriprs I Ate Mushrooms v1.6.24: A neural network-based Image and Noise Generator.

I ate Mushrooms is an image generated by a neural network generator. It lets you create weird, abstract, and hypnotizing animations using textual descriptions, 1,000 predefined categories of objects, or the footage you have created.

Compatibility:

It works on the AE 2022 or higher version. Try your configuration on the trial for free before purchasing.

Limitations:

- GPU mode isn't as stable as CPU mode.
- On Windows, An Nvidia GPU is required to run the GPU version of this plugin.

- **New!!! Text-to-Image -** Create images using descriptions of text. Great for creating simple patterns, objects, and other information.
- **Neural Transitions -** Create trippy interpolations from the footage you have created.
- **Numerous categories -** You can use up to 1000 categories of living creatures to feed your creativity.
- **Latent interpolation -** Interpolate between objects in the latent network to uncover the hidden relationship between things.
- **Loopable -** Each generation is fully loopable. You can also create customized noise maps to control you to create randomness in your work.
- **Object Fusion -** Combine images from various types to create strange new objects.
- **Abstract art -** Modify your designs using a variety of parameters to uncover the hidden corners of your neural network.
- **Combining with effects from other sources -** Use the plugin's creations to create other effects. It's a vastly varied noise generator ;)
