MecaFace is an add-on for Blender. MecaFace add-on lets you easily include a Lego-inspired two-dimensional face rig for any object within your Blender scene for renderings and animations. This bundle includes the add-on and a user guide to help you install and utilize the add-on and the rig.

MecaFace by Mecabricks is a feature that allows users to customize and personalize the facial expressions of digital LEGO minifigures within the Mecabricks platform. With MecaFace, users can easily adjust the facial features, such as eyes, eyebrows, mouth, and more, to create unique and expressive characters for their digital LEGO models. This feature enhances the creative capabilities of users by providing them with greater flexibility and control over the appearance of their virtual LEGO creations.

- You can easily add eyelashes as well as lips.
Easily add extra lines.
- Change the color of each component by using a stylish side panel.
- Create any mouth shape you'd like. It's flexible.
- Click one button and add an image of the object you are looking at.
- Controls that are easy to use to alter the shape of the eyes, mouth, and eyebrows.
- Click to apply settings to include the number of faces you'd like in the scene.
- Pose Library with many facial expression presets. This includes every necessary lip sync pose and many iconic faces from the Lego films.
- Realistic material.
- Change the size of the mouth using one slider.
- It is easy to add thickness to the surface.
- Work with Cycles However, it could also be compatible with Eevee. However, it isn't designed for it as of yet.

What is MecaFace by Mecabricks?

MecaFace is a feature provided by Mecabricks, an online platform for creating and sharing digital LEGO models. MecaFace allows users to customize the faces of LEGO minifigures in their digital creations. With MecaFace, users can choose from a variety of facial expressions, allowing for more detailed and expressive characters in their LEGO designs. This feature adds depth and personality to the models created on the Mecabricks platform.
